

SDG 12: Responsible and consumption and production

Ensure sustainable consumption and production patterns

The Efficient management of our shared natural resources and the way we dispose of waste and toxic pollutants are key to achieving this goal. Encouraging industries, businesses and consumers to recycle and reduce waste is equally important, as is supporting developing countries to move towards more sustainable consumption patterns by 2030.

Achieving this sustainable development goal depends on our management of shared natural resources and the way we dispose of toxic and polluting waste. This goal also depends, as importantly, on encouraging manufacturing industries and consumers to reduce the waste resulting from their consumption. Recycling is an important part of the production of the front product. In turn, the Arab University of Amman signed the bottle used by the partner company to produce a product from this used bottle again.

The university also provided special boxes throughout the campus to sort solid waste, paper and cardboard to be recycled and produced again.
